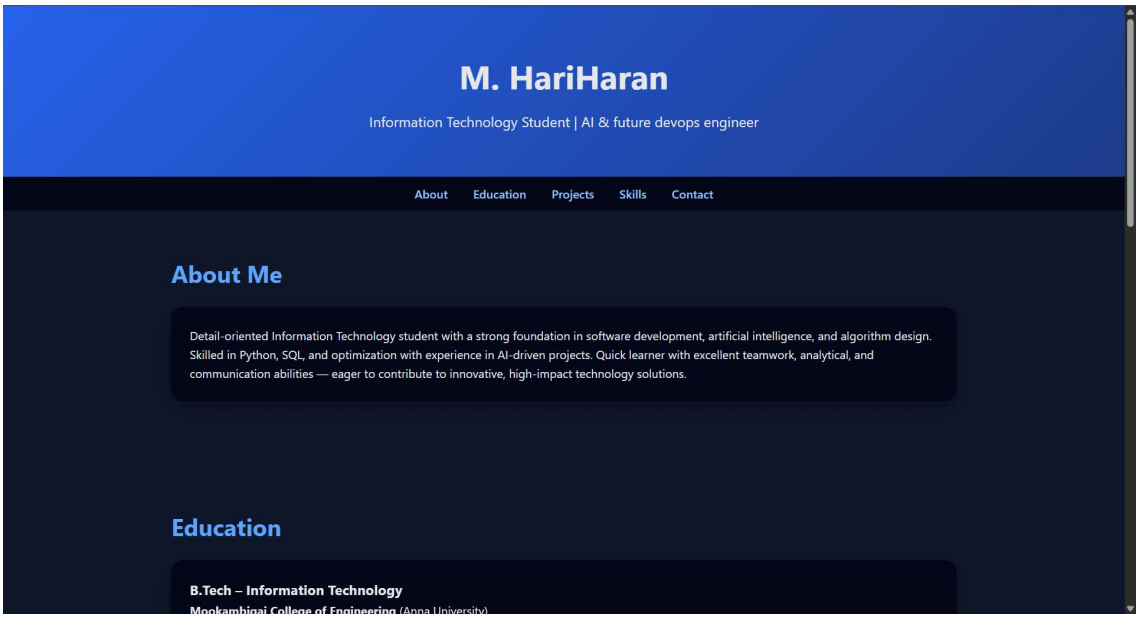
CUSTOMIZED TOMCAT SERVER HOSTING

Using **mkdir** I have created an directory and I created index.html in the directory using **nano.**

```
[root@ip-172-31-0-175 webapps]# mkdir sign
[root@ip-172-31-0-175 webapps]# ls
ROOT  docs  examples  host-manager  manager  sample  sign
[root@ip-172-31-0-175 webapps]# cd sign
[root@ip-172-31-0-175 sign]# nano sign
```


And I have hosted my portfolio in the TOMCAT SERVER.
